

Ukraine has become the world's most dynamic real-time testing ground for military and dual-use drones, with a pace and intensity of innovation unmatched anywhere else. While the United States remains the global leader in advanced drone technologies and counter-drone capabilities, only Ukraine tests new systems daily under the conditions of large-scale war. Battlefield needs accelerate engineering cycles to mere weeks, driving a constant flow of new platforms, hardware generations, and AI-enabled solutions—from FPV and long-range strike drones to EW-resistant systems, sensors, and loitering munitions.

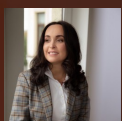

Ukraine Defence & Drone Tech

Study Visit → **March 2026**
Kyiv, Ukraine

This visit immerses participants directly in Ukraine's fast-evolving defence- and drone-tech ecosystem, offering a concise, on-the-ground understanding of battlefield needs, priority capability gaps, and emerging opportunities for joint R&D, pilots, localisation, investment, and technology co-development.

It is designed for defence and drone manufacturers, counter-drone and EW companies, frontier-tech innovators in AI and autonomy, investors, strategic partners, and policymakers seeking insight into how Ukraine's rapid innovation shapes global standards and creates new avenues for collaboration.
